

Bryan Cordes

Fort Myers, FL | (239) 777-8800 | Bryan.Cordes@bcordes.dev | <https://www.linkedin.com/in/bryancordes>

SUMMARY

Software Engineer with 7+ years of architecting, building, and optimizing web applications, APIs, and enterprise systems in Angular, React, Node.js, and C#/.NET. Experienced in monorepo and microservice architecture, cloud and self-managed infrastructure (Amazon Web Services (AWS), Google Cloud Platform (GCP), Terraform, Kubernetes), and delivery under PCI and GDPR compliance requirements. Delivers measurable results, including 80% faster application load times, test coverage raised from 12% to over 80%, and consolidation of siloed codebases into shared, maintainable architecture. Owns work end to end, from front-end architecture and API design through CI/CD pipelines and production infrastructure, across both in-house teams and client-facing contract engagements. Designs and instructs developer training curriculum alongside hands-on delivery.

EXPERIENCE

Intterra

Software Engineer (Contract via Sketch Development)

April 2026 - July 2026

- Migrated multiple React applications to a feature-based architecture, eliminating hundreds of lines of duplicated components across previously siloed codebases.
- Redesigned application architecture for performance, cutting load times by 80% and bundle size by 60%.
- Raised test coverage from 12% to over 80% and built continuous integration pipelines gating merges on passing builds, halving manual regression effort.
- Consolidated shared components fixes that propagated application-wide, reducing customer-reported bugs and hard-to-trace defects.
- Restructured the codebase for AI-assisted development, streamlining agent context to support long-running feature work.
- Standardized architectural boundaries and code ownership, reducing merge conflicts across the team.

Drop Collaborative

Software Engineer (Contract via Sketch Development)

November 2025 - February 2026

- Built a customer-facing enforcement management module within an existing Angular 21 application, enabling consultants and clients to create violation tracking workflows with complete audit trails for state regulatory compliance.
- Designed and built a C# workflow pipeline that automated notification routing, delivering violation and remediation events to the appropriate regulatory authorities and responsible personnel without manual intervention.
- Developed an end-to-end corrective action tracking system that streamlined communication between consultants and customers, reducing support inquiries through self-service visibility into enforcement plan status.
- Implemented workflow automation for regulatory violation remediation, providing real-time tracking of corrective actions from identification through resolution.

Valiantys

Software Engineer

July 2021 - August 2025

- Designed, built, and deployed 24+ Angular and React commercial applications, regularly surpassing client expectations through secure, scalable, and high-performing solutions.
- Designed and instructed curriculum for an Angular bootcamp serving developers across all experience levels as a client-facing service.
- Integrated Atlassian Rojo AI agents into the company-wide Nx monorepo, enabling scalable automation and cross-team collaboration.
- Led the software re-architecture into an Nx monorepo, improving code organization, version control, and cross-team efficiency, with a projected 72% reduction in merge conflicts.
- Optimized outsourced software, reducing latency, and improving overall performance to meet client expectations.
- Built web interfaces integrated with Jira Service Desk, streamlining support workflows, and improving portal usability.
- Created Electron and React tools integrated with Confluence, reducing developer overhead and simplifying Atlassian project migrations, contributing to a 37% increase in early contract completion.

Hyperion, LLC

Software Engineer

July 2019 - July 2021

- Built applications in an Nx monorepo with services in TypeScript, Nest.js, and Node.js.
- Developed APIs for Internet of Things (IoT) devices and legacy software, modernizing integrations.
- Applied SOLID and DRY principles to improve the maintainability and scalability of existing codebases.
- Migrated legacy MySQL databases to PostgreSQL for improved reliability.
- Implemented GraphQL queries and mutations for efficient data access.
- Delivered PCI-compliant e-commerce features and a secure Twilio-based verification system.
- Built a customer-facing kiosk system using Angular 9 and react.

Flightdocs Inc

Quality Assurance Intern

April 2019 - June 2019

- Developed and executed automation scripts and user-defined functions for daily testing.
- Designed and ran smoke tests in pre-production and production environments.
- Reported on automation coverage, issues, and improvement opportunities.

PROJECTS

Self-Hosted Infrastructure and DevOps Platform

- Maintain a 6-node Proxmox high-availability cluster running 27+ containerized services for 15 users at 99% uptime, with VLAN segmentation isolating workloads from each other.
- Operate automated k3s deployments driven from Git repositories, giving 6 developers dev, staging, and production environments at a fraction of managed-cloud cost.
- Harden the edge across multiple virtual private servers with CrowdSec, layered firewall rules, and load-balanced connections aggregated back to on-premises infrastructure.
- Implemented centralized single sign-on with Authelia and Pangolin, providing per-user access control and unified dashboards across all self-hosted applications.
- Manage encryption at rest and in transit, keeping user data isolated under a trusted local operator rather than third-party providers.
- Automate security patching and webhook-based downtime alerting to catch failures before users report them.

EDUCATION

Florida Gulf Coast University, Fort Myers, FL

Bachelor of Science, Software Engineering

August 2014 - May 2019

SKILLS

Languages: TypeScript, JavaScript, C#, Java, SQL, Bash, HTML5, SCSS/CSS

Frontend: Angular, React, Svelte, Blazor, Electron, GraphQL, REST, component architecture, state management, bundle and performance optimization

Backend and APIs: Node.js, Nest.js, Java, .NET, REST API design, GraphQL queries and mutations, microservices, modular monolith, CQRS, event-driven workflow automation, webhooks, Internet of Things (IoT) device integration

Databases and Storage: PostgreSQL, MySQL, MongoDB, Redis, Valkey, S3-compatible object storage (MinIO, Garage HQ), schema design, database migration

Cloud and Infrastructure: Amazon Web Services (AWS), Google Cloud Platform (GCP), Terraform, Ansible, Docker, Kubernetes (k8s), k3s, Proxmox, Linux, virtual private server (VPS) administration, high-availability clustering, load balancing, VLAN network segmentation

DevOps and Security: CI/CD pipelines, GitOps deployments, automated testing, test coverage enforcement, single sign-on (SSO), Authelia, CrowdSec, firewall configuration, encryption at rest and in transit, automated security patching, monitoring and alerting

Tools and Platforms: Atlassian Suite (Jira, Jira Service Desk, Confluence, Rovo), Nx, Turborepo, pnpm workspaces, monorepo tooling, Git, GitHub, GitLab, Gitea, Twilio

Practices: Agile, SOLID, DRY, code review, technical instruction and curriculum development, legacy modernization, regulatory audit trails, PCI compliance, GDPR compliance
